

## Advanced Metal Clay Series: Resin Jewelry Using Art Clay with Jackie Truty

# JACKIE'S TOP 5 TIPS

1

### Straight and narrow

Remember to roll your clay very straight without any marks when you make your second layer.

2

### Tight seal

Make sure your packing tape has stuck to every surface of both sides of the ring so the resin doesn't leak out.

3

### Clear is crucial

Don't forget to put a small amount of clear resin in the inside corners of the ring before you add color. Cure well.

4

### Beware of the dark side

Remember that the darker you make the color of your resin, the longer it will take to cure. Light is best.

5

### Smooth as glass

Use water while sanding the resin. Always wet sand as you work your way to a smooth finish. If you use sand paper, change it between grits to keep stray particles from scratching the resin.
