GOLDEN GLOW CABOCHON

Create your own polymer clay original. Then use it to create a mold in order to cast your custom cabochon in resin!

Making the Original

1. Condition some scrap clay, roll it into a ball, and flatten the back on a hard surface.
2. Create small crescents for surface décor.
3. Position the crescents to radiate out from the center.
4. Fill in the open spaces with more crescents.
5. Smooth the connections with a knitting needle. Aim for shallow crevices.
6. Create textured lines over the surface of the cabochon. This will make the final resin piece glow more intensely.
7. Bake it!

Molding and Casting

Find detailed instructions in your online workshop for creating a mold of the polymer clay piece, casting it in resin, and applying 24-carat gold leaf to make it glow!
